## 1 Introduction

Water is a fundamental element for life on Earth and is crucial for the dynamics of the planet.

```
[2]: import io, base64  
     from IPython.display import Image, HTML
```

```
[6]: Image(filename='cachoeira_448x298.jpg', width=448)
```

[6]:

In this brief note, we look at the dependency of the water density on the temperature, at sea level pressure and attempt to fit polynomial models to a certain set of available data.
